PROFESSIONAL SUMMARY

Full stack developer with 3+ years of hands-on experience building **secure, scalable applications** across frontend and backend, certified in fullstack software development (Teach2Give / The Jitu, 2025). Proven track record delivering **API integrations**, **ETL workflows**, and **CI/CD pipelines** that improved deployment speed by 30% and reduced production errors by 20%. Seeking to apply strong **system integration** and **data management** skills in a regulated, high-impact environment such as financial services.

EXPERIENCE

Full Stack Developer — Teach2Give / The Jitu *May 2025 – Aug 2025 · Nairobi, Kenya*

Accredited fullstack programme — certified Aug 2025

- Reduced frontend development time by 50% by designing and deploying **RESTful API integrations** using ExpressJS and Bun runtime, enabling seamless **data exchange** between React frontends and PostgreSQL backends across three team projects.
- Accelerated deployment speed by 30% by implementing an automated **CI/CD pipeline** via Vercel and GitHub Actions, enforcing input validation and **secure coding standards** that reduced production errors by 20%.
- Improved **data integrity** and development speed by 25% by architecting an **ETL workflow** using Prisma ORM and Neon cloud database — extracting, transforming and loading structured content into PostgreSQL with automated schema validation, mirroring data governance practices common in financial services environments.
- Delivered a fully integrated **full-stack application** (blogging platform and note-taking system) with a cross-functional team of 10+, applying **agile sprint** ceremonies, stand-ups, and retrospectives throughout the delivery cycle.
- Raised codebase maintainability by 30% by mentoring peers on OOP design patterns, data structures, and **code optimisation** techniques, reducing code duplication across shared modules.

AI Engineering Team Lead — PastLens · JKUAT AI Hackathon *Jul 2025 – Nov 2025 · Murang'a*

1st runners-up, Culture Preservation category

- Cut development time by 12 days by defining role-based task assignments across a 5-member team — covering **system architecture**, documentation, and product management — ensuring parallel delivery tracks and clear accountability.
- Delivered a working AI prototype in 21 days by training a computer vision model on labelled image datasets and integrating language translation APIs to support Kikuyu and Maasai artefact analysis, demonstrating end-to-end **system integration** across ML and web layers.

- Maintained **data accuracy** standards by implementing a **data pipeline** that extracted, cleansed and labelled over 500 cultural artefact images throughout model training and evaluation.

Volunteer Software Developer — Google Developer Student Club *Jan 2023 – Sep 2024 · Murang'a University*

- Increased practical coding confidence among 40+ peers by designing and facilitating hands-on workshops in Python and JavaScript, covering **data structures**, OOP, and **application development** best practices.
- Reduced DRY code violations by 40% across peer projects by leading structured sessions on code reuse principles and **process optimisation**, directly improving the quality and maintainability of team-built applications.

TECHNICAL SKILLS

Languages: JavaScript / TypeScript · Python · SQL · GoLang · C++ · HTML / CSS

Frameworks & runtime: React · Node.js · Express.js · HonoJS / Bun · Tailwind CSS · Material UI

Databases & data: PostgreSQL · MySQL · Prisma ORM · MongoDB · Redis

DevOps & tooling: Git / GitHub · Docker · GitHub Actions (CI/CD) · Vercel · Postman · Jupyter Notebook

EDUCATION

Fullstack Software Development

Completed Aug 2025

Teach2Give / The Jitu — Nairobi, Kenya

BSc Software Engineering

In progress — expected Aug 2026

Murang'a University of Technology

CERTIFICATIONS

- Certified Software Developer — Teach2Give / The Jitu, 2025
- CCNA: Introduction to Networks — Cisco Networking Academy
